

AGROMEK awards HARDI's new liquid system

30 November 2012

Among the 90 two-and three-star New Product exhibits at AGROMEK, nine won Agromek Prizes. A dynamic fluid system for field sprayers was honored with a AGROMEK prize for work in the field. The liquid system "DynamicFluid4" was developed & exhibited by HARDI INTERNATIONAL A/S.

The Prize Committee put emphasis on the very fast response time of the new DynamicFluid4 fluid system.

It provides a better spray distribution especially in the headlands, which means you no longer need to spray for many meters before the spray is distributed evenly and correctly.

As the system makes a pre-calculation of dose and forward speed, it opens with a pressure and fluid volume which is very close to your target rate. After that it only needs to make small adjustments.

The new HARDI fluid system gets input from four sensors that provide data to the spray computer. The four sensors ensure optimum control and back up each other, so spraying can continue even if one or more sensors fail.
