

HARDI now introduces the complete COMMANDER heavy-duty models

27 November 2012

The complete updated COMMANDER family from now 3300 to 7000 l will be presented at the Danish Agromek exhibition

During the last two years, HARDI has developed the COMMANDER trailer series. This has resulted in 37 updates reducing "downtime" and making the spray job easier, simpler and faster for the end user. HARDI now introduces the complete COMMANDER heavy-duty models, developed for spraying with higher spraying speeds, above 20 km/h on some markets, resulting in better performance and increased overall capacity. The expectations are high for this new product line of trailed sprayers. :

- COMMANDER 3300 l
- COMMANDER 4500 l
- COMMANDER 5500 l
- COMMANDER 7000 l

On top of the updates, the general idea has been to keep all the great features in the concept such as the SafeTrack with DEC (DynamicElectronicControl), ensuring an even higher degree of stability at sharp turns, the SIMA awarded filters which automatically shut off liquid from the main tank when being inspected, the air assisted TWIN boom range, the functional design and WorkZone, the reason why the product has been assigned 17 awards since its introduction.
